

LIQUID FUEL CONDITIONING PANEL

OVERVIEW

Liquid fuel panels accurately measure, monitor, and deliver liquid fuels to engines under test. Strainers, filters and heaters ensure that fuel is delivered to engine at a specified condition.

KEY FEATURES

- Custom engineered for required footprint
- Integrated with data acquisition and controls
- Flexible solutions tailored to required volume and treatment conditions
- Turn-key system delivery
- Accurately measure and monitor fuel flow rate, temperature and pressure
- Outlet and return cartridge filters maintain proper fuel condition
- Strainer separates air from fuel
- Heat exchanger maintains fuel temperature
- Fully automated through test cell controls
- Diesel
- Gasoline
